

Apple MeetingSDK v0.13 Release Notes. (October 6, 2023)

NOTE:

Please see previous MeetingSDK Release Notes for an overview of what was introduced in earlier releases of the SDK.

API CHANGES

Added a new `MeetingSDKDelegate` method that is called when joining a meeting that contains the JSON representation (string) of an MJWT:

```
func meetingToken(decodedToken: String)
```

CHANGES/FIXES

Potential fix of a bug where an occasional crash may occur when processing low level `audio_site_changed` events.

Miscellaneous bug fixes in underlying audio and video engines

KNOWN ISSUES

When sharing a window into the meeting, the remote user may see the share freeze if the shared window is resized while being actively shared.

The new `previewVideoUpdated` delegate method may *not* be called when a device rotates. This will be resolved in a future SDK release.

In support of the new threading model, all delegate methods are executed on a serial `OperationQueue` that is created by the SDK. Future versions will allow you to specify an `OperationQueue` that you create (or use the main queue)

The `VideoView.isScreenShare()` API call will likely return `true` for non screen-share video streams if they are being sent at 4K resolution.
