

Apple MeetingSDK v0.6.5 Release Notes. (June 5, 2023)

NOTE:

Please see the v0.6 MeetingSDK Release Notes for an overview of what is new in the v0.6.x releases of the SDK.

API CHANGES

None

CHANGES/FIXES

Fixed a bug that caused sound in a meeting to not “come back on” after an interruption occurred (such as an incoming phone call or playing movies/sounds in a another application)

KNOWN ISSUES

The new `previewVideoUpdated` delegate method may *not* be called when a device rotates. This will be resolved in a future SDK release.

In support of the new threading model, all delegate methods are executed on a serial `OperationQueue` that is created by the SDK. Future versions will allow you to specify an `OperationQueue` that you create (or use the main queue)

The `VideoView.isScreenShare()` API call will likely return `true` for non screen-share video streams if they are being sent at 4K resolution.
