

Apple VisionableSDK v1.0.1 Release Notes (July 2, 2024)

API CHANGES

none

CHANGES/FIXES

Fixed a crash that resulted when attempting to enable a video preview.

KNOWN ISSUES

When screen sharing from iOS and placing the application in the background, iOS may suspend the app (and cause screen sharing to be paused) if the iOS device is running low on system resources.

When sharing a window into the meeting, the remote user may see the share freeze if the shared window is resized while being actively shared.

The new `previewVideoUpdated` delegate method may *not* be called when a device rotates. This will be resolved in a future SDK release.

In support of the new threading model, all delegate methods are executed on a serial `OperationQueue` that is created by the SDK. Future versions will allow you to specify an `OperationQueue` that you create (or use the main queue)
