

Apple MeetingSDK v0.6.4 Release Notes. (May 25, 2023)

NOTE:

Please see the v0.6 MeetingSDK Release Notes for an overview of what is new in the v0.6.x releases of the SDK.

API CHANGES

None

CHANGES/FIXES

General fixes in the underlying audio and video engines.

Fixed a problem where the SDK would keep trying to process video frames from previews in certain situations after the preview was ended.

Updated the mechanism used to convey low-level individual frame data to the application to increase stability.

KNOWN ISSUES

The new `previewVideoUpdated` delegate method may *not* be called when a device rotates. This will be resolved in a future SDK release.

In support of the new threading model, all delegate methods are executed on a serial `OperationQueue` that is created by the SDK. Future versions will allow you to specify an `OperationQueue` that you create (or use the main queue)

The `VideoView.isScreenShare()` API call will likely return `true` for non screen-share video streams if they are being sent at 4K resolution.
